

BIG **SAVINGS** **for your Laundry**

**KILL
COVID-19**

Fresher, Brighter, Cleaner, Safer, Softer, Greener

- Kill COVID-19, Staph,c.diff, and other viruses and bacteria on your linen in seconds
- Wash in cold water only – save BIG on gas bills and slash your carbon footprint
- Cut chemical use by 75% - use only a small amount of detergent and nothing else
- Greatly improve the quality of your finished product
- Eliminate chemical residues that dull your linen and make it rough and smelly
- Use the power of supercharged oxygen to totally clean and totally sanitize your linen

Fresher – Get clothesline-fresh linen, like Nature intended. Completely eliminate germs and odors! No more chemical residues and the rough feel and odd smell that goes along with them

Brighter – Eliminate hard water deposits that dull your linens over time. Get whiter whites without using optical brighteners. Rejuvenate tired, old towels and make them fluffy and white again! Remove deposits that have built-up over time to make old towels look and feel like new again!

Cleaner – The **Storm** uses ozone (supercharged oxygen) to thoroughly clean, deodorize and sanitize your laundry much better than all the chemicals you are currently using, and it leaves absolutely no residues! Eliminate odors and the bacteria that cause them; kill mold spores so your wet linen won't sour near as fast; destroy COVID-19, MRSA staph and clostridium difficile (c.diff) that chlorine and hot water can't touch. **Put the power of a thunderstorm in your washing machine**

Safer – **KILL COVID-19 ON CONTACT** - Superior sanitation: Ozone is the most powerful sanitizer available! Works thousands of times faster and far more effectively than bleach to kill all microorganisms. The use of chlorine bleach produces very powerful cancer-causing vapors. Ozone replaces bleach and eliminates these dangerous vapors. Ozone also replaces most of the other laundry chemicals used, eliminating the chemical residues in the fabric that could potentially aggravate allergies and existing skin conditions.

Softer – The **Storm** eliminates chemical residues that cause stiffness and scratchiness in the fabrics. Most laundries use fabric softener to overcome this problem, but the fabric softeners come with their own set of serious concerns: clogging dryer lint screens which reduces efficiency, higher energy use, and creating a fire hazard. The **Storm** softens the water and removes hard water buildup. After a few washes, ozone will return your sheets and towels to their maximum softness and fluffiness, like when they were new!

Greener – Using the **Storm** will greatly reduce the environmental impact of your laundry by greatly reducing your carbon footprint; reducing plastic waste; eliminating the chemical burden to surface water supplies; eliminating harmful VOC's produced by using chlorine bleach; greatly extending the life of your linen and drastically reducing the environmental footprint of replacing it!
